

THE GALAXY HEAD

From the introduction to the Centinel system on page 4, you will understand the basic Centinel planetary movement: moon around the earth, and earth around the sun.

Centreline has now extended the range to a multi-spindle system which incorporates multiple main drive (sun) gears. This is the GALAXY HEAD with 2, 3 or 4 main drive gears to which standard spindle assemblies can be mounted. This 'universe' configuration greatly extends the versatility of the Centinel without any loss of rigidity.

The GALAXY concept can also be used in conjunction with the Centinel Plus System on page 19, incorporating the interchangeable module.
