

RAPIDTAP

HIGH SPEED MULTI-TAPPING

ADVANTAGES

The Centreline Rapidtap is a high speed tapping machine that is fast, versatile and easy to use.

Designed for single and multi-spindle tapping of steel pressings, die castings, plastic mouldings and other light hand-sized parts, the Rapidtap has proved itself in operation as a high speed machine tool which can drastically reduce production times and increase the quality of the finished component. Rapidtap can use both fixed and adjustable multi-spindle heads.

By combining the known accuracy of ground taps with Centreline's versatile fixture design, which often eliminates the need to clamp the component, Rapidtap provides the production engineer with the answer to most tapping problems.

For the purposes of clarity most illustrations show the machine guards removed.
